TITLE OF INVENTION
AN INTEGRATED SYSTEM FOR PROVIDING COMMUNICATIONS NETWORK MANAGEMENT SERVICES AND INTERACTIVE GENERATING INVOICE DOCUMENTS

ATTY'S DOCKET NO.	CLASS-SUBCLASS	BATCH NO.	APPLN. TYPE	SMALL ENTITY	FEE DUE	DATE DUE
680	COS-97-087	709-223.000	W81 UTILITY	NO	\$1240.00	03/20/01

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED.

THE ISSUE FEE MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED.

HOW TO RESPOND TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.
If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

- A. If the status is changed, pay twice the amount of the FEE DUE shown above and notify the Patent and Trademark Office of the change in status, or
- B. If the status is the same, pay the FEE DUE shown above.

If the SMALL ENTITY is shown as NO:

- A. Pay FEE DUE shown above, or
- B. File verified statement of Small Entity Status before, or with, payment of 1/2 the FEE DUE shown above.

II. Part B-Issue Fee Transmittal should be completed and returned to the Patent and Trademark Office (PTO) with your ISSUE FEE. Even if the ISSUE FEE has already been paid by charge to deposit account, Part B Issue Fee Transmittal should be completed and returned. If you are charging the ISSUE FEE to your deposit account, section "4b" of Part B-Issue Fee Transmittal should be completed and an extra copy of the form should be submitted.

III. All communications regarding this application must give application number and batch number.
Please direct all communications prior to issuance to Box ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

1. An Examiner's Amendment to the record appears below. Should the changes or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the Issue Fee.

2. Pursuant to M.P.E.P. §606.01, this title has respectfully been changed to read as follows:

-- AN INTEGRATED SYSTEM FOR PROVIDING COMMUNICATIONS
NETWORK MANAGEMENT SERVICES AND INTERACTIVE GENERATING INVOICE
DOCUMENTS --

3. The following is an Examiner's Statement of Reasons for Allowance:

The prior art of the record, (Ginter et al. US. Patent 5,892,900) teaches a systems and methods for electronic commerce including secure transaction management and electronic rights protection. Electronic appliances such as computers employed in accordance with the present invention help to ensure that information is accessed and used only in authorized ways, and maintain the integrity, availability, and/or confidentiality of the information. Secure subsystems used with such electronic appliances provide a distributed virtual distribution environment (VDE) that may enforce a secure chain of handling and control, for example, to control and/or meter or otherwise monitor use of electronically stored or disseminated information. Such a

Art Unit: 2152

virtual distribution environment may be used to protect rights of various participants in electronic commerce and other electronic or electronic-facilitated transactions. Secure distributed and other operating system environments and architectures, employing, for example, secure semiconductor processing arrangements that may establish secure, protected environments at each node.

The prior art of the record, (Gish US. Patent 5,892,900) teaches an enterprise computing manager provides coordination between application programs by having each server program controlling the client executable program. In this manner, each client program communicates from the client to the server using a predefined protocol. A distributed computer system is disclosed with software for a client computer, a server computer and a network for connecting the client computer to the server computer which utilize an execution framework code segment configured to couple the server computer and the client computer via the network, by a plurality of client computer code segments resident on the server, each for transmission over the network to a client computer to initiate coupling; and a plurality of server computer code segments resident on the server which execute on the server in response to initiation of coupling via the network with a particular client utilizing the transmitted client computer code segment for communicating via a particular communication protocol.

Art Unit: 2152

The prior art of the record, (Roger et al. US. Patent 5,892,900) teaches a World Wide Web browser makes requests to web servers on a network which receive and fulfill requests as an agent of the browser client, organizing distributed sub-agents as distributed integration solution (DIS) servers on an intranet network supporting the web server which also has an access agent servers accessible over the Internet. DIS servers execute selected capsule objects which perform programmable functions upon a received command from a web server control program agent for retrieving, from a database gateway coupled to a plurality of database resources upon a single request made from a Hypertext document, requested information from multiple data bases located at different types of databases geographically dispersed, performing calculations, formatting, and other services prior to reporting to the web browser or to other locations, in a selected format, as in a display, fax, printer, and to customer installations or to TV video subscribers, with account tracking. Intrepretive language based programs or applets are downloaded from the web server to the client and executed on the client machine for online analytical processing from a web browser. The Web client accesses a web server and downloads HTML and a Java applet(s). This enables use of multiple databases of different types using a single request from a client for Online Analytical Processing (OLAP) from a web browser.

Prior arts of the record teach the invention substantially, but they fail to teach or suggest individually or in combination that an integrated system for providing a plurality

Art Unit: 2152

of communications network management services and products to a customer over the public Internet, said network management services and products accessible from a client workstation employing a client browser associated with said customer and receiving web based communications from a communications service enterprise, said system comprising:

Secure web servers for managing one or more secure client sessions over the Internet in response to customer entry into said system, each said one or more secure web servers supporting secure communications with said client workstation;

A plurality of one or more client applications integrated within a web-based GUI and downloaded from the one or more secure web servers according to predetermined customer entitlement, each of said one or more client applications for providing a customer interface integrated within said web based GUI and enabling interactive communications with one or more communications network management resources provided by said communications service enterprise via the one or more secure web servers; and,

Each of said one or-more secure web servers supporting communication of request messages entered by said customer via said customer interface to said one or more network management resources providing a desired communications network management function;

wherein one or more remote application resource processes said request messages and provides responses to said one or more secure web servers for secure

Art Unit: 2152

uploading to said client browser and display via said integrated customer interface, said one or more network management resources including a system for generating invoice documents relating to communications management services provided by a communications -service enterprise, comprising:

A client application downloaded from the one or more secure web servers for enabling selection and presentation of invoice documents in accordance with customer entitlement, said client application further generating an invoice request message in response to customer selection of a specific invoice option and forwarding the invoice request message via the secure web server, and

an invoice application server for maintaining a database of image files associated with invoice documents from the application service and receiving the invoice request message, said invoice application server accessing the database in response to a request message, generating a response message including a customer selected invoice document and downloading said response message to said client workstation, whereby said customer selected invoice document is formatted in a manner suitable for display via said integrated client interface, as set forth in independent claims 1. Claims 2-43, 45-97 AND 99-109 are allowed because of the combination of other limitations and the limitation set listed above.

4. Drawings objected to by the Draftsperson under 37 CFR 1.84 or 1.152, correction noted on PTO-948 is required. Examiner respectfully proposes the following

Art Unit: 2152

corrections to Drawings according to 37 CFR 1.81, 1.83-1.85 and MPEP § 608.02, wherein for proper understanding of the invention drawings should be illustrated in the form of labeled representation (e.g. avoid the use of acronyms and label each feature accordingly).
